

RediCompute is a reliable, affordable cloud computing service that eliminates the cost and concerns of having to deploy, manage, and support infrastructure for your critical applications and data. You gain the same capabilities enjoyed by large enterprises—in a turnkey package for a fraction of the cost.

Worry-Free Enterprise-Class Data Center Capabilities

Now get the power and reach of an enterprise-class data center without having to build and maintain it yourself. You can count on high availability and performance for your business-critical applications and data. Extend applications to everyone who needs them, wherever they are needed. Handle unpredictable traffic peaks or lulls without scrambling to add infrastructure or pay for resources that sit idle.

We Make it Simple

We make it simple for you to support new business strategies that rely on IT. With rediCompute, you already have the infrastructure to deploy applications of any size. You can avoid dedicating budget and space to host and manage applications yourself. We make it easy to move to the cloud with minimal impact to your business and network.

Built-in Security

The rediCompute service has built-in security, eliminating the need for you to deploy extra data protection measures. Every subscription includes a dedicated private network for your traffic, firewalling, virtual private network capabilities for secure remote access, and a public IP address. You can then add layers of system encryption, antivirus, and host-based firewalls for ultimate protection.

Fast Deployment

Move applications to rediCompute within hours. Connect users in just minutes. Quickly test new technologies, deploy new applications, and launch new features in a fraction of the time it would otherwise take to build, test, and deploy your own infrastructure.

Cost-Effective Options

Buy the right level of service for your applications, and don't pay for capabilities you don't need. We help reduce the costs and space associated with deploying and managing applications yourself so that you can focus on your business. RediCompute is the easiest way to gain enterprise data center capabilities without the high price tag.

rediCompute

Service Models

rediCompute Shared

Designed for typical server workloads, this option provides cost-effective cloud computing by sharing the underlying infrastructure while keeping your applications and data logically separate from other customers.

rediCompute Reserved

For critical workloads that require high performance, this option gives you 100% guaranteed resources on shared underlying infrastructure while keeping applications and data logically separate from other customers.

rediCompute Dedicated

This rediCompute service model dedicates server blades to your applications for extra flexibility. Dedicated blades enhance security and performance and enable you to customize your hypervisor layer and support third-party plugins. Additionally, we can dedicate storage arrays specifically to your organization.

rediCompute Storage

Storage is available in up to six tiers with the ability to reserve 25-1000 IOPS per VM, based on your application performance requirements. Eliminate worries of exceeding "capped" tiers or performance degradation due to oversubscription.

Powerful, Industry-leading Technology and Performance

RediCompute is built on an enterprise-class platform, which includes VMware virtualization, Cisco Unified Computing System (UCS) platforms, and leading-edge storage solutions. We offer six storage tiers, using a combination SSD and SAS storage to ensure high performance. Unlike providers who cap tiers at a maximum, we ensure IOPS by reserving what you need, regardless of tier or other customer storage usage. And with rediCompute Service Level Agreements (SLAs), you receive high performance and 99.999% availability.

Control Your Cloud

As a rediCompute customer, you receive a Virtual Data Center that contains everything you need. Your system administrator has role-based access to permission additional users, configure Virtual Machines (VMs), manage firewall security, and easily scale resources up or down.

Budget Predictability

Size your resources based on workload and performance requirements. Our infrastructure enables you to afford enterprise-class scale, performance, and reliability with predictable monthly bills and no budget surprises.

Flexible, Simple Licensing

We believe that you should be able to leverage your existing software investments in our cloud. That's why we support License Mobility, which allows you to use existing Microsoft-based licensing in our cloud and eliminate additional licensing costs. We also offer pay-as-you-go licensing for Microsoft Windows Server, Microsoft SQL Server, Microsoft Exchange Server, and other products.

The Business Agility You Need

With rediCompute, you're never boxed in. We support thousands of applications and more than 50 operating systems. Test and deploy applications without building infrastructure, and greatly accelerate key business initiatives without any obstacles.
